GUSTAVO MESQUITA

Senior QA Engineer

Três Pontas, Minas Gerais, Brazil (remote) · +55 35 99800-6544
gustavogmmg@hotmail.com · linkedin.com/in/qa-gustavo-mesquita · github.com/gustavaom7

SUMMARY

— 9+ years in QA (since 2017) across web, mobile web and native iOS/Android apps — functional, exploratory, API and automated testing.
— **4+ years integrated into international remote teams**, with own equipment and infrastructure.
— Currently quality owner for Estrela Bet and Vupi (betting brands): test strategy, **Playwright** automation, API and performance testing (**k6**).
— Built QA processes from scratch as the first QA at Smarter Apps, and covered a 30+ app portfolio at Air Apps.
— Uses AI agents to speed up QA: **test generation** (Playwright MCP), bug reports and **defect triage** (Claude Code).

CORE SKILLS

Testing: Functional, exploratory, regression, E2E, API, performance, cross-browser and cross-device testing

Automation & languages: Playwright (primary), Cypress, Selenium, Appium, Maestro · JavaScript, TypeScript

API, data & performance: Postman, Swagger, Proxyman, SQL, k6

CI/CD & tools: GitHub Actions, GitLab CI, Docker · Jira, Xray, TestRail · Crashlytics, Firebase, Amplitude

AI-assisted QA: Playwright MCP, Figma MCP, Claude Code, LLM agents for test generation and defect triage

Domains: iGaming and sports betting, mobile subscription apps, payments and in-app purchases, ad monetization, software consultancies

EXPERIENCE

Senior QA Engineer (Test Automation) — Estrela Bet · Remote — Apr 2026 – Present

— Owns quality end-to-end — test strategy, infrastructure and reporting — for two betting brands (Estrela Bet and Vupi) across web, mobile web and native app, with full autonomy over the QA stack.
— Automates end-to-end flows across the whole betting platform (sportsbook, live betting, online casino, live casino) on web and mobile with **Playwright**.
— Tests APIs with **Postman**, **Swagger** and **Proxyman**, and validates data directly in the database with **SQL** queries.
— Cut test-case writing time by up to 90% by building an AI-driven test generation workflow with **Playwright MCP**, where agents map application pages and write test cases that run on web and simulated mobile.
— Cut daily application checkups from 3 hours to under 30 minutes by automating the E2E regression suite across web and mobile.
— Built **Claude Code** skills that auto-generate test cases, bug reports and acceptance criteria from a feature description, plus an agent that triages test failures into Jira-ready defect reports.
— Built a **k6** pipeline that measures key page-load metrics after every deploy and publishes results to Slack, reducing performance regressions reaching production.
— Validates UI against design specs with **Figma MCP**, catching layout and styling mismatches before release.
— Tests CRM, user management and loyalty features on the Smartico platform, focused on retention: campaigns and gamification flows.
— Runs cross-device checks on physical iOS and Android devices and cloud device farms (**BrowserStack**, **LambdaTest**), monitors releases and validates production updates after deployment.

iOS QA Engineer — Smarter Apps · Remote — Sep 2025 – May 2026

- First QA hire: built the QA process from scratch and presented weekly quality reports on open and closed bugs.
- Cut manual mobile test cycles by 50% per release by building test automation frameworks from scratch with **Maestro** and **Appium**.
- Validated paywalls and monetization flows (**Superwall**) and analytics event integrity (**Amplitude**).
- Monitored per-app stability in **Crashlytics** and reproduced crashes from Amplitude events and stack traces to speed up fixes.
- Analyzed network traffic with **Proxyman**, verified feature flags and A/B tests in Firebase Remote Config, and managed test cases in Xray and issues in Jira.

iOS QA Engineer — Air Apps · Remote — Mar 2023 – Sep 2025

- Part of a 3-person QA team covering 30+ mobile apps with weekly releases.
- Built core regression suites in **TestRail** from past bugs and critical flows, and set a 95% pass-rate release gate — every new bug became a traceable test case.
- Validated subscription journeys end to end (**OneSignal**): trials, cancellations, renewals, upgrades and downgrades.
- Sustained 99% crash-free sessions by monitoring **Crashlytics** and validating Remote Configs.
- Validated ad (rewarded, interstitial) and in-app purchase flows.

QA Analyst — Oowlish · Remote — May 2022 – Mar 2023

- First QA on a web scheduling platform for a major US client with no staging environment — releases went straight to production.
- Cut production-breaking releases by proposing and implementing **Cypress** E2E tests as a mandatory **GitHub Actions** deploy gate.
- Worked with Product Managers and Scrum Masters to define acceptance criteria and keep delivery aligned with business requirements.

QA Analyst — Programmer's – Beyond IT · Campinas, SP — Jan 2022 – May 2022

- Validated functional requirements within Scrum sprints, writing test cases and running regression and exploratory suites.
- Presented product progress to the client every sprint and joined refinement sessions on my own initiative to plan tests around what the client actually asked for, reducing dev–client conflicts.

QA Intern → QA Analyst — 4intelligence · Santa Rita do Sapucaí, MG — Sep 2020 – Jan 2022

- Built a front-end automation framework with **Cypress** and JavaScript, and automated API tests with **Postman**; containerized environments with **Docker** and implemented CI/CD in **GitHub Actions**.

QA Intern — Inatel · Santa Rita do Sapucaí, MG — Jun 2017 – Jun 2019

- Wrote and ran test scripts on technical projects for early defect detection, working closely with developers.

EDUCATION

B.S., Control and Automation Engineering — Instituto Nacional de Telecomunicações (Inatel), 2017–2022

Technical degree, Electronics (Industrial Automation) — ETE Francisco Moreira da Costa, 2014–2016
